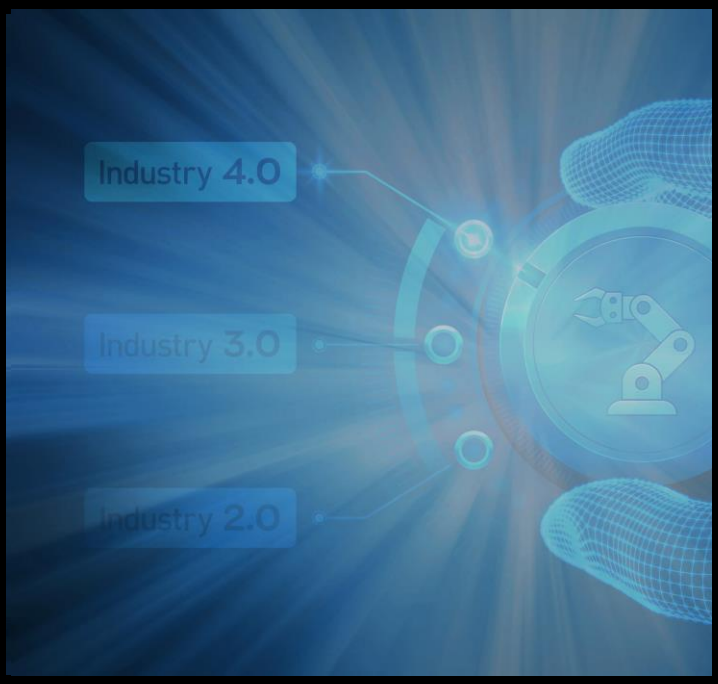
Helping Manufacturers Navigate AI/ ML, IIoT, and Industry 4.0



Stellarus is a full-service Industry 4.0 Technology and Business Consultant Firm focused on industrial and electronics manufacturing, smart equipment integration, machine connectivity, manufacturing execution systems software (MES), and today's AI/ML Advanced Analytics.

Moving from Industry 3.0 to 4.0 is both a requirement to remain competitive in today's market and a daunting challenge for most organizations. Stellarus has the experience necessary to help you make the best decisions for your organization as you embark on your digital journey.

Having worked with many of the largest global manufacturing corporations and software solutions vendors, the Stellarus Group possesses vast knowledge of the challenges manufacturing companies face and the opportunities inherent in evolving their organizations towards a digitalized future.

Why do Companies Choose Stellarus?

An Industry 4.0 Project is always more difficult than you think. We can help you:

1 /
To Save Time
Industry 4.0 and Digitalization projects are notoriously underestimated. Stellarus has been involved in hundreds of deployments. We cut through the clutter of supplier evaluations, build vs. buy, technology matching, milestoning, etc. Our experience instantly expedites the process and provides the direction you need.

2 /
To Add Focus
More times than not, an Industry 4.0 or Software Solution evaluation does not come with new personnel. These projects are almost always added to a person or team's existing workload creating a competition between "regular" work and this new project on their list.

3 /
To Apply Experience
You undoubtedly have a very smart team that is capable of many things, but how many of them have been through this (sometimes) complicated project scope? Stellarus Group has done these types of projects for both large and small companies. We help your team succeed!

4 /
To Ensure Success
In our mutual industry, the list is long of people and companies that failed in one way or another when they have taken upon these types of projects. They are complicated. The decisions are extremely impactful. The difference between success and failure can be disastrous to you and your company. You don't have to go it alone.

5 /
Stellarus Can Help
The stakes are so high whether you're implementing an Industry 4.0 strategy, Digitizing your process, Digitalizing your factory, or implementing an Advanced Analytics process locally or in the cloud. Let's meet and have a conversation to see what we can do together!
